PROFESSIONAL SUMMARY

Sales manager in enterprise AI infrastructure. At Supermicro (Sales Team 1, USA) I diagnose a target's demand from its filings before pitching, qualify the ISV, VAR and SI route before the first call, design partner enablement with product management, and open verticals through multi-channel plays, including the export-control due diligence restricted-GPU deals require. Built and run with multi-agent Codex and Claude harnesses under my own project management. Twelve years across energy storage, datacenter and HPC hardware, and SaaS. MBA, Marketing.

WORK EXPERIENCE

Super Micro Computer, Inc. (Supermicro)

Mar 2026 - Present

Sales Manager - Sales Team 1 (USA), Key Accounts & New Business Development

San Jose, CA

- Designed, built and operate the sales-development system I sell with. A demand-diagnosis engine (37 Python modules) reads a target's 10-K and 10-Q across 16 quarters - capex trajectory, free cash flow, margins, DSO/DIO/DPO working-capital cycle, interest coverage - to name the operating problem behind the numbers, time the procurement window, and emit the workload map, product fit, qualification score, talk track and named buyer the pitch is built from. A part-number decision map (7,738 SKUs, 19 families -- open it at [\[tuosmc.github.io/SMC-Product-Decoder/\]\(https://tuosmc.github.io/SMC-Product-Decoder/#home\)](https://tuosmc.github.io/SMC-Product-Decoder/)) resolves the pitch to a system and routes it to the right internal buyer and product manager.
- Opened medical and pharmaceutical, a segment Supermicro sales had only reached through a US HPC reseller - not to displace the reseller, but to earn a seat at the POC and more voice and account-development rights through a multi-channel, hybrid-channel motion across the vertical's ISVs. Built the playbook from the root: 59 software categories, 999 sub-markets, 309 curated and 195 provisional vendors mapped to who signs for the hardware, with a sales plan per lead through 4 solution plays, 14 purchase triggers and a 100-point account score -- open the live playbook at [\[tuosmc.github.io/medpharma-gtm/\]\(https://tuosmc.github.io/medpharma-gtm/\)](https://tuosmc.github.io/medpharma-gtm/).
- Designed partner enablement for Hammerspace (software-defined storage) with product management and the alliance team: a 37-page brief for their channel and SE leadership sizing training to the deal rather than the architecture - 57 role-scoped depth questions for a 90-minute session -- read the brief at [\[tuosmc.github.io/hammerspace-enablement-brief/\]\(https://tuosmc.github.io/hammerspace-enablement-brief/\)](https://tuosmc.github.io/hammerspace-enablement-brief/) - to decide per market between multi-channel integration and niche-segment penetration, then route the ISV into the colocation accounts and homogeneous channel partners I research first-hand (account brief: [\[tuosmc.github.io/dlr-supermicro-brief/\]\(https://tuosmc.github.io/dlr-supermicro-brief/dlr-brief.html\)](https://tuosmc.github.io/dlr-supermicro-brief/); dossiers: [\[tuosmc.github.io/ai-hpc-target-dossiers/\]\(https://tuosmc.github.io/ai-hpc-target-dossiers/\)](https://tuosmc.github.io/ai-hpc-target-dossiers/)).
- Automated the end-user due diligence a restricted-GPU deal depends on, so a company name and a website are enough to start: the required forms come back largely prefilled from government and public records, every counterparty screened against the published US restricted-party and exclusion lists with red flags scored individually, and two adversarial verification passes run over my own output before I submit anything. Goals in fixed order: compliance, qualification speed, completeness. The deliverable is a bilingual investigation report with an open-gap ledger naming what is still unverified.
- Wrote the event playbook the team sells from - who attends, which of their people are on the floor, how an HPC manufacturer reaches them: AMD Advancing AI 2026, all 62 sponsors mapped to an account matrix (11 existing customers, 7 channel, 21 partner candidates) with a 30-day plan -- [\[tuosmc.github.io/amd-advancing-ai-2026-command-center/\]\(https://tuosmc.github.io/amd-advancing-ai-2026-command-center/\)](https://tuosmc.github.io/amd-advancing-ai-2026-command-center/); Yotta 2026, 160 sessions, 190 speakers, 284 sponsors, 102 vendors ranked by buyer line -- [\[tuosmc.github.io/yotta-2026/\]\(https://tuosmc.github.io/yotta-2026/yotta-command-center.en.html\)](https://tuosmc.github.io/yotta-2026/yotta-command-center.en.html); Ray Summit 2026, a 58-company account board with 1,003 per-cell citations -- [\[tuosmc.github.io/ray-summit-2026-intel/\]\(https://tuosmc.github.io/ray-summit-2026-intel/\)](https://tuosmc.github.io/ray-summit-2026-intel/).

SW Sustainability Solution

Feb 2025 - Oct 2025

Inside Sales Professional

Union City, CA

- Re-established CRM relationships with key Life Science distributors, sustaining accounts and surfacing upsell opportunities.
- Onboarded new distributors across government, medical and industrial sectors in the Northeast.

Alpha ESS

Aug 2023 - Feb 2025

Senior Business Development Manager

San Jose, CA

- Led a 6MW/12MWh grid-scale liquid-cooled energy storage deployment under Chile's PMGD program, delivered on time and within budget to UL and IEC standards.
- Led the SMILE-SP/SPB residential ESS launch in North America to UL1973 and UL9540A, and the global launch of the STORION-LC-200 liquid-cooled C&I platform.
- Automated PRM/RFQ/RFP workflows for behind-the-meter C&I storage (+15% price-per-volume, +12% conversions) and rebuilt inventory and RMA flows (−18% errors, −20% delays, response times cut 25%).

Chelion America

May 2022 - Apr 2023

Inside Sales Manager

Santa Clara, CA

- Built performance dashboards and customer metrics reporting covering satisfaction trends, response efficiency and renewal probability, enabling proactive upsell and retention.

UTM - Server Retrofit / Metal Recycling

Jan 2020 - Mar 2022

General Manager (Contractor)

San José, Costa Rica / Los Angeles, CA

- Orchestrated cross-functional sourcing and RFQ/RFP cycles on GPU, NVMe and HBM supply with a three-year cost roadmap and Incoterms 2020 terms for HPC scalability.

Think Tank Learning

May 2015 - Dec 2019

Regional Director

San Jose, CA

- Achieved 90% of sales quota and secured \$2.3 million in SaaS contracts through consultative, solution-led selling.

PROJECTS

Cyber Silicon Valley Keynote

Co-presented keynote on agentic AI infrastructure at the San Jose Tech Conference & Expo (Jun 2026); authored the 23-slide single-file web deck (inline-SVG diagrams, keyboard and fullscreen navigation, no external JavaScript), published on GitHub Pages.

MirrorClaw v0.9.0 Private | AI-assisted

Python 3.12 website-mirroring tool for Windows: asyncio two-pass crawl-and-rewrite engine, three fetch backends, conditional-GET incremental re-crawls, PySide6 GUI, PyInstaller + Inno Setup release pipeline on GitHub Actions.

dataset-tidy Private | directed & coded

Dataset-cleaning package: exact and MinHash-LSH near-duplicate removal, PII guard, decontamination and repair passes; ~485 self-checks across 14 test scripts; five findings from an AI penetration-testing audit remediated.

Agent Trio Orchestrator Open source

CLI that health-checks, authenticates, wakes and smoke-tests three coding-agent CLIs from one entrypoint with JSON status; published with two Agent Skills for equity research and workflow-packaging review.

SKILLS

Sales & GTM: Key account management, New business development, Channel, ISV & SI programs, Partner enablement, Salesforce, Quote-to-order (SAP), Competitive intelligence

Domain: GPU / HPC server platforms, Datacenter & colocation, Export control & restricted-GPU compliance, Energy storage systems

Technical: Python, SQL / DuckDB, Financial-statement analysis (10-K/10-Q), Multi-agent Codex / Claude harnesses, English, Mandarin Chinese (Traditional)

EDUCATION

MBA, Marketing	San Diego State University	2014
Bachelor, Economics	Fu Jen Catholic University	2010
