Decision-Rights & Legal Coordination Brief

A sanitized demonstration of how contract facts, Legal questions, commercial requests, and preservation needs were separated, routed, and controlled inside a cross-functional program.

這份匿名化文件展示：如何在跨部門 program 中，把 contract facts、Legal questions、commercial requests 與 preservation needs 分開、轉交並受控管理。

NOT LEGAL ADVICE · NOT THE ORIGINAL INTERNAL LEGAL REFERRAL · NO SOURCE REPRODUCTION

The program organized the question. Authorized owners decided the answer.

Program leadership maintained the factual baseline, chronology, owner map, decision deadline, and distribution discipline. It did not decide breach, causation, liability, refund entitlement, or remedy.

Program leadership 維持 factual baseline、chronology、owner map、decision deadline 與 distribution discipline；但不自行決定 breach、causation、liability、refund entitlement 或 remedy。

01 · CONTRACT FACTS

Verify before interpreting

Use the executed-source baseline; separate operative text, missing documents, assumptions, and Legal implications.

以 executed-source baseline 為準，拆開 operative text、缺少文件、assumptions 與 Legal implications。

02 · LEGAL QUESTIONS

Route exact decisions

Frame the narrow question, relevant facts, source grade, open gaps, and requested decision—without writing counsel's conclusion.

把問題、相關 facts、source grade、open gaps 與 requested decision 寫清楚，不代替 counsel 下結論。

03 · COMMERCIAL ASKS

Document without conceding

Record refund, complimentary PoC, and compensation requests while preserving authorization boundaries.

記錄 refund、complimentary PoC 與 compensation requests，同時保留授權邊界。

04 · PRESERVATION

Protect the record

Identify relevant source categories, custodians, handling rules, and owner instructions before records disappear or change.

在資料消失或改變前，確認 source categories、custodians、handling rules 與 owner instructions。

GOVERNANCE MATRIX

What the program controlled.

Every lane had a different source standard, authorized owner, and prohibited shortcut.

ISSUE LANE	PROGRAM RESPONSIBILITY	DECISION OWNER	BOUNDARY
Executed contract	Confirm the governing source, identify exact open documents, distinguish text from inference.	Legal / Contracts	No Sales-authored legal effect.
Operational event	Preserve dates, observations, technical records, and status without converting correlation into causation.	Technical / Facility / Legal	No unsupported RCA.
RMA & diagnostics	Coordinate intake, test cadence, delivery, reinstallation, and requests for formal disposition.	RMA / Engineering	PASS does not equal formal closure.
Refund / compensation	Capture the request, source trail, requested amount category, owner, and next decision.	Finance / Legal / management	No unauthorized concession.
Customer communication	Use approved facts, state open status, avoid labels that pre-judge fault or entitlement.	Account / Legal / management	No implied admission or denial.
Preservation	Surface record categories, custodians, overwrite risk, secure handling, and unresolved instructions.	Legal / IT Security / source owner	No self-defined hold scope.

REFUND CONTROL

Document the request. Protect the decision.

CAPTURE Record what was requested, when, through which source, and which facts remain unverified. 記錄要求內容、時間、source，以及仍未確認的 facts。	ROUTE Assign Finance, Legal, and management ownership; define the next decision and approval path. 指定 Finance、Legal 與 management owner，明確下一個 decision 與 approval path。	CONTROL Keep acknowledgment separate from entitlement; do not promise credit, refund, replacement, or remedy without authority. 把 acknowledgment 與 entitlement 分開；未獲授權不得承諾 credit、refund、replacement 或 remedy。

DECISION RIGHTS

What Program leadership can own—and what it must route.

Program / Sales can own

- One factual baseline and dated chronology
- Source grade, open gaps, and correction log
- Named owner, next decision, and follow-up cadence
- Approved factual communication and handoff
- Secure document handling and audience control

Authorized owners retain

- Contract interpretation and legal effect
- Causation, breach, liability, and remedy
- Refund entitlement and commercial approval
- Final technical disposition and formal closure
- Preservation or litigation-hold scope

SAFE MANAGEMENT HANDOFF

A narrow extract—not a dump of the case file.

Included here

Process, governance, aggregate program scale, role boundaries, and the owner-routing method.

本文件只包含 process、governance、aggregate program scale、role boundaries 與 owner-routing method。

Intentionally excluded

Identifiers, names, signatures, addresses, amounts, customer quotes, contract clauses, correspondence, legal theories, private paths, and raw technical records.

刻意排除 identifiers、names、signatures、addresses、amounts、customer quotes、contract clauses、correspondence、legal theories、private paths 與 raw technical records。

Legal-lane principle / Legal 線原則

Facts and questions may be coordinated. Legal conclusions, privilege decisions, liability positions, and remedies remain with counsel and authorized management.

Document status / 文件狀態

New supervisor-facing allowlist extract authored from the controlled program record. It is not the original internal Legal referral, signed agreement, legal opinion, or customer-facing communication; it does not reproduce confidential or potentially privileged source material.
